

NO TAPE NO ADHESIVES ONLY SECURE COMFORT!

Pediatric Sleeve

Withstands up to 6 lbs. of pull on the primary tubing with no catheter failure

IV Sleeve

Withstands up to 15 lbs. of pull on the primary tubing with no catheter failure

PICC
Withstands of

Sleeve

up to 15 lbs. pull on the primary tubing with no catheter failure

Patient safety matters!

The Stedline™ devices are disposable primary tubing stabilization devices that reduce the risk of Infusion failures due to movement, without the aid of tape or adhesives.

Item #3100- Stedline Pediatric Sleeves- 50 to a box, 400 to a case
Item #4100- Stedline IV Sleeve- 25 to a box, 200 to a case
Item #5100- Stedline PICC Sleeve- 15 to a box, 120 to a case

Once it's placed Keep it in place!

Infusion Nursing Standards of Practice ... 2016

(Page S72 & S73, 37, J)

***“BE AWARE OF THE RISK OF MEDICAL ADHESIVE RELATED SKIN INJURY
ASSOCIATED WITH THE USE OF ADHESIVE BASED
ENGINEERED SECUREMENT DEVICES!”***

***“The IV catheter survival rate with the use of nonsterile tape was 8%”
ati Nursing Education***

“Loosened tape or accidental pull on IV primary tubing result in partial retraction of the catheter.”

I.V. Therapy, An Incredibly Easy Pocket Guide, Philadelphia: Lippincott Williams & Watkins, 2006. 63

“Studies show primary tubing securement will reduce movement of catheters in the vein and assist in occlusion prevention.”

Kerner, John A, et al “Treatment of Catheter Occlusion in Pediatric Patients. “Journal of Parenteral and Enteral Nutrition Vol3.

“Inadequately secured IVs can pose patient safety issues and result in complications as well as higher nursing and material costs. Use of stabilization devices for peripheral IVs is the standard of care for patients requiring infusion therapy.”

Dawn Bausone-Gazda, BSN, RN, clinical operations assistant and principal investigator for the venous access device team of Advocate Child Medical Center. Oak Lawn IL.

“Avoid use of tape and sutures as a means of securement as they are not as effective.”

Infusion Nursing Standards of Practice, 2016

The Stedline IV Sleeve meets INS policies and procedures as an Engineered Stabilization Device, according to the Infusion Nursing Standards of Practice, 2016.

Once the catheter is inserted and the transparent semipermeable membrane is applied, simply use the appropriate Stedline device to provide stabilization without any tapes or adhesives.
